

# Hindi vidya Prachar Samiti's Ramniranjan Jhunjhunwala College

of Arts, Science & Commerce
(Autonomous College)

### Affiliated to

UNIVERSITY OF MUMBAI

Syllabus for the T.Y.B.Sc.

**Program: B.Sc. Statistics** 

**Program Code: RJSUSTA** 

**Choice based Credit System (CBCS)** 

With effect from the academic year 2018-19

### T.Y.B.Sc. STATISTICS Syllabus

### **Credit Based and Grading System**

### To be implemented from the Academic year 2018-2019

### SEMESTER V

### Theory

	UNI	TOPICS	G 111	T / XX/ 1
Course	T		Credits	L / Week
	I	Probability-I		1
	II	Probability-II		1
RJSUSTA501	III	Joint Moment Generating Function Trinomial & Multinomial Distribution	2.5	1
	IV	Order Statistics		1
	I	Point Estimation & Properties Of Estimators		1
	II	Methods of Estimation	-	1
RJSUSTA502  RJSUSTA503	III	Bayesian Estimation Method & Interval Estimation	2.5	1
	IV	Introduction to Linear Models		1
	I	Epidemic Models		1
	II	Bioassay	2.5	1
	III	Clinical Trials	2.3	1
	IV	Clinical Trials and Bioequivalence		1
RJSUSTA504	I	Fundamental of R		1
	II	Simple Linear Regression Model	2.5	1
	III	Multiple Linear Regression Model	2.3	1
	IV	Validity Of Assumptions		1

Course	PRACTICALS	Credits	L / Week
RJSUSTA P501	Practicals of Course RJSUSTA501 + Course RJSUSTA502	3	8
RJSUSTA P502	Practicals of Course RJSUSTA503 + Course RJSUSTA504	3	8

### **Learning Objectives:**

- To strengthen the concepts in mathematical statistics.
- To prepare students to develop their own models.

PROBABILITY AND DISTRIBUTION THEORY	2.5 Credits (60 lectures)	
BILITY I	15 Lectures	
(i) Basic definitions: Random Experiment, Outcome, Event, Sample Space, Complementary, Mutually Exclusive, Exhaustive and Equally Likely Events.  (ii) Mathematical, Statistical, Axiomatic and Subjective probability.  (iii) Sub populations and partitions. Derivation of a) A <sub>r,n</sub> : Number of distinguishable distributions of putting r indistinguishable balls in n cells; b) Number of distinguishable distributions of putting r indistinguishable balls in n cells such that no cell is empty.  (iv) Ordered samples and runs.  (v) Probabilities based on a) Maxwell Boltzmann, Bose Einstein and Fermi Dirac Statistics.  (vi) Addition Theorem for (a) two (b) three events.		
Unit II : PROBABILITY II		
<ul> <li>(i) Theorems on Probability of realization of:</li> <li>(a) At least one (b) Exactly m (c) At least m of N events A<sub>1</sub>, A<sub>2</sub>, A<sub>3</sub>A<sub>N</sub>.</li> <li>Matching and Guessing problems.</li> <li>(ii) Conditional Probability: Multiplication Theorem for two, three events.</li> <li>Independence of two/three events - complete and pair wise.</li> <li>(iii) Bayes' theorem.</li> </ul>		
(Ref. 1,2,5,8)		
Unit III: JOINT MOMENT GENERATING FUNCTION, TRINOMIAL AND  MULTINOMIAL DISTRIBUTION  (i) Definition and properties of Moment Generating Function (MGF) of two random variables of discrete and continuous type. Necessary and Sufficient condition for independence of two random variables.  Concept and definition of Multivariate MGF.  (ii) Trinomial distribution:  Definition of ioint probability distribution of (X, Y), Joint moment, generating		
	bility I  ons: Random Experiment, Outcome, Event, Sample Space, ary, Mutually Exclusive, Exhaustive and Equally Likely Events.  , Statistical, Axiomatic and Subjective probability. ons and partitions.  f a) A <sub>r,n</sub> : Number of distinguishable distributions of putting r indistinguishable balls in n cells;  b) Number of distinguishable distributions of putting r indistinguishable balls in n cells such that no cell is empty. ples and runs. based on a) Maxwell Boltzmann, Bose Einstein and Fermi ics. corem for (a) two (b) three events.  (Ref. 1,2,5,7,8)  ABILITY II  Probability of realization of: e (b) Exactly m (c) At least m of N events A <sub>1</sub> , A <sub>2</sub> , A <sub>3</sub> A <sub>N</sub> . Guessing problems. robability: Multiplication Theorem for two, three events. of two/three events - complete and pair wise. em.  (Ref. 1,2,5,8)  T MOMENT GENERATING FUNCTION, TRINOMIAL AND L DISTRIBUTION I properties of Moment Generating Function (MGF) of two random iscrete and continuous type. Necessary and Sufficient condition for of two random variables. definition of Multivariate MGF.	

function, moments  $\mu_{rs}$  where r=0, 1, 2 and s=0, 1, 2. Marginal & Conditional distributions. Their Means & Variances.

Correlation coefficient between (X, Y). Distribution of the Sum X+Y.

(iii) Extension to Multinomial distribution with parameters  $(n, p_1, p_2, ..., p_{k-1})$  where  $p_1+p_2+...p_{k-1}+p_k=1$ . Expression for joint MGF. Derivation of: joint probability distribution of  $(X_i, X_j)$ . Conditional probability distribution of  $X_i$  given  $X_j = x_j$ .

(Ref.2,3,6,7)

### **Unit IV: ORDER STATISTICS**

15 Lectures

- (i) Definition of Order Statistics based on a random sample.
- (ii) Derivation of:
  - (a) Cumulative distribution function of r<sup>th</sup> order statistic.
  - (b) Probability density function of the r<sup>th</sup> order statistic.
  - (c) Joint Probability density function of the r<sup>th</sup> and the s<sup>th</sup> order statistic (r<s)
  - (d) Joint Probability density function of all n ordered statistics.
- (iii) Probability density function of Median (in the case of odd sample sizes) and Range for Uniform and Exponential distributions.

(Ref.2,3,4)

**Learning Objective:** To enable students to develop the technique of model building using software.

Course Code	Title	Credits
1		

RJSUSTA504	Regression Analysis using R software	2.5 Credits
NOSUSTASUT	Regression Analysis using R software	(60 lectures)
Unit I : Fundan	nentals of R	15 Lectures
	features of R, installation of R, Starting and ending R session, , Value assigning to variables	
Basic Operations	: +, -, *, ÷, ^, sqrt	
Numerical functi	ons : log 10, log, sort, max, unique, range, length,	
	var, prod, sum, summary, dim, sort, etc	
Data Types	: Vector, list, matrices, array and data frame	
Variable Type	: logical, numeric, integer, complex, character	
	and factor	
Data Manipulation	en : Selecting random N rows, removing	
,	duplicate row(s), dropping a variable(s) Renaming variable(s), sub setting data,	
	creating a new variable(s), selecting of	
	random fraction of row(s),	
	appending of row(s) and column(s),	
	simulation variable	
Data Processing	: Data import and export, setting working	
	directory, checking structure of Data	
	:Str(), Class(), Changing type of variable	
	(for eg as.factor, as.numeric)	
Data Visualisatio	on using ggplot: Simple bar diagram, subdivided bar	
	diagram, multiple bar diagram pie diagram,	
	Box plot for one and more variables,	
	histogram, frequency polygon, scatter plot	
	eg plot().	
	( Ref. 6,7,8,9,10 )	
	(101. 0,7,0,2,10)	

Unit II : Simple Linear Regression Model	15 Lectures
Assumptions of the model, Derivation of ordinary least square (OLS)	
estimators of regression coefficients for simple, Properties of least square	
estimators (without proof), Coefficient of determination R <sup>2</sup> and adjusted R <sup>2</sup> ,	
Procedure of testing	
a) Overall significance of the models	
b) Significance of individual coefficients	
c) Confidence intervals for the regression coefficients	
Data Pre-processing: Detection and treatment of missing value(s)and	
outliers, Variable selection and Model building, Interpretation of output	
produced by lm command in R. Polynomial	
Regression Models.	
( Ref. 1,2,3,4,5 )	
Unit III : Multiple Linear Regression Model	15 Lectures
Derivation of ordinary least square (OLS) estimators of regression	
coefficients for multiple regression models, Coefficient of determination R <sup>2</sup>	
and adjusted R <sup>2</sup> , Procedure of testing	
a) Overall significance of the models	
b) Significance of individual coefficients	
c) Confidence intervals for the regression coefficients	
Data Pre-processing: Detection and treatment of missing value(s) and	
outliers, Variable selection and Model building, Interpretation of output	
produced by lm command in R.	
( Ref.1,2,3,4,5 )	
Unit IV : Validity of Assumptions	15 Lectures
Residual Diagnostics: Standardized residuals, Studentized residuals, residual	
plots, Interpretation of four plots of ,Interpretation output produced by plot	
command in R and corrective measures such as transformation of response	
variable, testing normality of data.	

Autocorrelation: Concept and detection using Durbin Watson Test,

Interpretation of output produced by DW-test function in R,

Heteroscedasticity: Concept and detection using Breusch -Pagan-Godfrey

Test, Interpretation of output produced by bptest function in R,

Multicollinearity: Concept and detection using R<sup>2</sup> and t-ratios ii) pairwise

correlation between repressors iii) Variance Inflation Factor(VIF),

Interpretation of output produced by metest function in R,

Consequences of using OLS estimators in presence of Autocorrelation,

Heteroscedasticity and Multicollinearity, Remedial measures.

(Ref.1,2,3,4,5)

To be implemented from the Academic year 2018-2019

### SEMESTER VI

### Theory

Course	UNIT	TOPICS	Credits	L / Week
	I	Bivariate Normal Distribution		1
RJSUSTA601	II	Generating Functions	2.5	1
KJSUSTAUUT	III	Stochastic Processes	2.3	1
	IV	Queueing Theory		1
	I	Most Powerful Tests		1
RJSUSTA602	II	Uniformly Most Powerful & Likelihood Ratio Tests	2.5	1
	III	Sequential Probability Ratio Test (SPRT)		1
	IV	Non-Parametric Tests		1
	I	Linear Programming Problem		1
RJSUSTA603	II	Inventory Control	2.5	1
KJSUSTA003	III	Replacement Theory		1
	IV	Simulation And Reliability		1
	I	Mortality Tables		1
RJSUSTA604	II	Compound Interest And Annuities Certain	2.5	1
	III	Life Annuities		1
	IV	Assurance Benefits		1

Course	PRACTICALS	Credits	L / Week
RJSUSTA P601	Practicals of Course RJSUSTA601 + Course RJSUSTA602	3	8
RJSUSTA P602	Practicals of Course RJSUSTA603 + Course RJSUSTA604	3	8

### **Learning Objectives:**

- To strengthen the concepts in mathematical statistics.
- To prepare students to develop stochastics and queueing models.

Course Code	Title	Credits
D ICIICE A COA	DISTRIBUTION THEORY AND STOCHASTIC	2.5 Credits
RJSUSTA601	<u>PROCESSES</u>	(60 lectures )
Unit I : BIVARI	ATE NORMAL DISTRIBUTION	15 Lectures
<ul> <li>i) Definition of joint probability distribution (X, Y). Joint Moment Generating function, moments μ<sub>rs</sub> where r=0, 1, 2 and s=0, 1, 2. Marginal &amp; Conditional distributions. Their Means &amp; Variances.  Correlation coefficient between the random variables.  Necessary and sufficient condition for the independence of X and Y.  Distribution of aX + bY, where 'a' and 'b' are constants.</li> <li>ii) Distribution of sample correlation coefficient when ρ = 0.  Testing the significance of a correlation coefficient.  Fisher's z – transformation.  Tests for i) H<sub>0</sub>: ρ = ρ<sub>0</sub> ii) H<sub>0</sub>: ρ<sub>1</sub> = ρ<sub>2</sub>  Confidence interval for ρ.</li> </ul>		
	(Ref. 2,3,5,9)	
Unit II: GENERATING FUNCTIONS  Definitions of generating function and probability generating function. Expression for mean and variance in terms of generating functions. Definition of a convolution of two or more sequences. Generating function of a convolution. Generating functions of the standard discrete distributions. Relation between:  i) Bernoulli and Binomial distributions ii) Geometric and Negative Binomial distributions in terms of convolutions.		15 Lectures
(Ref.1,5)		
Unit III: STOCHASTIC PROCESSES		15 Lectures
for: (i) Pure birth and a >0 (iii) Yul (v) Death process process (viii) Line	Definition of stochastic process. Postulates and difference differential equations for : (i) Pure birth process (ii) Poisson process with initially 'a' members, for a =0 and a >0 (iii) Yule Furry process (iv)Pure death process (v) Death process with $\mu_n=\mu$ (vi) Death process with $\mu_n=\mu$ (vii) Birth and death process (viii) Linear growth model. Derivation of $P_n$ (t), mean and variance where ever applicable.	
	(Ref.1,7,9)	

Unit IV: QUEUEING THEORY	15 Lectures
Basic elements of the Queuing model.	
Roles of the Poisson and Exponential distributions.	
Derivation of Steady state probabilities for birth and death process. Steady state	
probabilities and various average characteristics for the following models:	
(i) $(M/M/1): (GD/\infty/\infty)$ (ii) $(M/M/1): (GD/N/\infty)$	
(iii) $(M/M/c)$ : $(GD/\infty/\infty)$ (iv) $(M/M/c)$ : $(GD/N/\infty)$	
(v) $(M/M/\infty)$ : $(GD/\infty/\infty)$ (Ref.6)

6	Assurance benefits

#### **Semester End Examination- THEORY**

At the end of the semester, examination of two hours duration and 60 marks based on the four units shall be held for each course.

Pattern of **Theory question** paper at the end of the semester for *each course*:

There shall be **Four** compulsory Questions of **Fifteen** marks each with internal option. Question1 based on Unit I, Question 2 based on Unit II, Question 3 based on Unit III, Question 4 based on Unit IV.

### **Internal Examination**

The paper pattern of the question paper of IA1 and IA2 will be as follows:

Question 1: 5 questions of one mark each,

Question 2: (a) 1 question of two marks, (b) 1 question of three marks,

Question 3: Attempt any two out of three questions, each of five marks.

### **Semester End Examination- PRACTICALS**

At end of the semester, examination of one and half hours duration and 50 marks shall be held for each course.

Students will attempt 1 question out of 2 questions, each of 40 marks. Each question will have atleast four sub-questions. Journal-05 marks, Viva-05 marks.

\*\*\*\*\*

Syllabus for Semester V and Semester VI
Program: B.Sc.
Course: Computer Programming and
System Analysis
(APPLIED COMPONENT)

### **Learning Objective:**

- To create the learners with the ability & skill to analyze & resolve information technology problems.
- Prepare the students to extend current knowledge & skill to computing environment.

Course Code: RJSUMATSAC501 2 CREDITS

#### UNIT I: RELATIONAL DATA BASE MANAGEMENT SYSTEM – 15 Lectures

- 1. Introduction to Data base Concepts: Database, Overview of data base management system. Data base Languages- Data Definition Languages (DDL) and Data Manipulation Languages (DML).
- 2. Entity Relation Model: Entity, artibutes, keys, relations, Designing ER diagram, integrity Constraints over relations, conversion of ER to relations with and without constrains.
- 3. SQL Commands and functions
- a) Creating and altering tables: CREATE statement with constraints like KEY, CHECK, DEFAULT, ALTER and DROP statement.
- b) Handling data using SQL: selecting data using SELECT statement, FROM clause, WHERE clause, HAVING clause, ORDERBY, GROUP BY, DISTINCT and ALL predicates, Adding data with INSERT statement, changing data with UPDATE statement, removing data with DELETE statement.
- c) Functions: Aggregate functions- AVG, SUM, MIN, MAX and COUNT, Date functions- ADD\_MONTHS(), CURRENT\_DATE(), LAST\_DAY(), MONTHS\_BETWEEN(), NEXT\_DAY(). String functions- LOWER(), UPPER(), LTRIN(), RTRIM(), TRIN(), INSERT(), RIGHT(), LEFT(), LENGTH(), SUBSTR(). Numeric functions: ABS(), EXP(), LOG(), SQRT(), POWER(), SIGN(), ROUND(number).
- d) Joining tables: Inner, outer and cross joins, union.

#### **UNIT II Algorithm & Flowcharts – 15 Lectures**

- 1.Logic Building: Brain storming, Mind map creation, Logic building
- 2.Flow- Charts: Various symbols used in flow charts, creating simple flow charts.
- 3. Conditional branching in flow charts, multiple condition handling in Flow charts, Iteration or Loops in flow charts.
- 4. Algorithm: Introduction & uses of Algorithm.
- 5. Making Algorithm for simple logic based questions.
- 6. Algorithm for Sorting- Bubble sorting, Searching Linear search & Binary Search

#### **UNIT III: INTRODUCTION TO JAVA PROGRAMMING - 15 Lectures**

- 1. Object-Oriented approach: Features of object-orientations: Abstraction, Inheritance, Encapsulation and Polymorphism.
- 2. Introduction: History of Java features, different types of Java programs, Differentiate Java with C. Java Virtual Machine.
- 3. Java Basics: Variables and data types, declaring variables, literals numeric, Boolean, character and string literals, keywords, type conversion and casting. Standard default values. Java Operators, Loops and Controls
- 4. Classes: Defining a class, creating instance and class members: creating object of a class, accessing instance variables of a class, creating method, naming method of a class, accessing method of a class,
- 5. Access control: public access, friendly access, protected access, private access.

#### **UNIT IV: JAVA PROGRAMMING CONCEPTS – 15 Lectures**

- 1. Arrays: one and two dimensional array, declaring array variables, creating array objects, accessing array elements.
- **2.** overloading method, 'this' keyword, constructor and Finalizer: Basic Constructor, parameterized constructor, calling another constructor, finalize() method, overloading constructor.
- 3. Inheritance Various types so inheritance, super and sub classes, Extend keyword, Super keyword, creating abstract class, creating abstract methods, method overriding
- 4. Interface- creating interface, implementing interface
- 5. Final Final variables, Final methods & Final classes

#### References:

#### **SEMESTER VI**

Course code: RJSUMATSAC601 2 CREDITS

#### **UNIT I: JAVA EXCEPTION HANDLING & APPLETS**

15 LECTURES

- 1) Exception Handling and Packages: Need for Expectional Hndling, Exception Handlig techniques: try and catch, multiple catch statements, finally block, us age of throw and throws.
- 2) Concept of packages. Inter class method: parseInt().
- 3) Applets: Difference of applet and application, creating applets, applet life cycle, passing parameters to applets.
- 4) Graphics, Fonts and Color: The graphics class, painting, repainting and updating an applet, sizing graphics. Font class, draw graphical figures-lines and rectangle, circle and ellipse, drawing arcs, drawing polygons. Working with Colors: Color methods, setting the paint mode.

#### **UNIT II: JAVA AWT & EVENT HANDLING**

15 LECTURES

- 1) AWT package: Components for Graphical User Interface: Label, Button, List, Checkbox; Text Field, Text Area, Radio button.
- 2) Layout Managers Arranging controls with FlowLayout, BorderLayout, GridLayout. Arranging controls with fixed locations.
- 3) Container classes Creating Panel and adding various components to it.
- 4) Event Handlers- Using ActionListener for Button click event, ItemListener for Checkbox control, ItemListener for Radio Button, MouseListener For mouse events.

#### **UNIT III: PYTHON 3.x 15 LECTURES**

1. Introduction: The Python Programming Language, History, features, Installing Python.

Running Code in the Interactive Shell, IDLE. Input, Processing, and Output, Editing, Saving, and Running a Script, Debugging: Syntax Errors, Runtime Errors, Semantic Errors, Experimental Debugging.

- 2. Data types and expressions: Variables and the Assignment Statement , Program Comments and Docstrings . Data Types-Numericintegers & Floating-point numbers. Boolean, string. Mathematical operators +, \*, \*\* , %. PEMDAS.Arithmetic expressions, Mixed-Mode Arithmetic and type Conversion, type(). Input(), print(), program comments. id(), int(), str(), float().
- 3. Loops and selection statements: Definite Iteration: The for Loop, Executing statements a given number of times, Specifying the steps using the steps using that count down, Boolean and Comparison operators and Expressions, Conditional and alternative statements- Chained and Nested Conditionals: if, if-else, if-elif-else, nested if, nested if-else. Compound Boolean Expressions, Conditional Iteration: The while Loop—with True condition, the break Statement. Random Numbers. Loop Logic, errors, and testing.

Reference Fundamentals of Python First programs 2nd edition by Kenneth A Lambert chapter 1,2,3

#### Unit IV STRINGS, LIST AND DICTIONARIES. 15 LECTURES

- 1. Strings, Lists, Tuple, Dictionary: Accessing characters, indexing, slicing, replacing. Concatenation (+), Repetition (\*). Searching a substring with the 'in' Operator, Traversing string using while and for. String methods- find, join, split, lower, upper. len().
- **2.** Lists Accessing and slicing, Basic Operations (Comparison, +),List membership and for loop.Replacing element (list is mutable). List methods- append, extend, insert, pop, sort. Max(), min(). Tuples.

Dictionaries-Creating a Dictionary, Adding keys and replacing Values , dictionary - key( ), value( ), get( ), pop( ) , Traversing a Dictionary.

Math module: sin(), cos(),exp(), sqrt(), constants-pi, e.

- 3. Design with functions: Defining Simple Functions- Parameters and Arguments, the return Statement, tuple as return value. Boolean Functions. Defining a main function. Defining and tracing recursive functions.
- 4. Exception handling: try- except.

#### **Suggested Practical:**

- 1. Write a program that demonstrates the use of input from the user using parse Int().
- 2. Write a Java applet to demonstrate graphics, Font and Color classes.
- **3.** Write a Java program to illustrate AWT package.
- **4.** Preparing investment report by calculating compound interest, computing approximate value of by using the =  $1 + + \cdots$  (Gottfried Leibniz)
- **5.** Convert decimal to binary, octal using string, Write the encrypted text of each of the following words using a Caesar cipher with a distance value of 3.
- **6.** Hexadecimal to binary using dictionary, finding median of list of numbers.
- 7. Enhanced Multiplication Table Generator, Unit Converter, Fraction Calculator.
- 8. Factor Finder, Graphical Equation Solver
- 9. Summing a Series, Solving Single-Variable Inequalities

### Pattern of Theory question paper at the end of the semester for each course: Total Marks: 60 Duration: 2:00 hrs

- Q.1) Based on Unit 1 [marks: 12]
  - a) Solve any 2 of 3 (6 marks)
  - b) Solve any 2 of 3 (6 marks)
- Q.2 ) Based on Unit 2 [ marks : 12 ]
  - a) Solve any 2 of 3 (6 marks)
  - b) Solve any 2 of 3 (6 marks)
- Q.3 ) Based on Unit 3 [ marks : 12 ]
  - a) Solve any 2 of 3 (6 marks)
  - b) Solve any 2 of 3 (6 marks)
- Q.4) Based on Unit 4 [ marks : 12 ]
  - a) Solve any 2 of 3 (6 marks)
  - b) Solve any 2 of 3 (6 marks)
- Q.5 ) Based on Unit 1,2,3,4 [ marks : 12 ]
  - a) Solve any 2 of 3 (6 marks)
  - b) Solve any 2 of 3 (6 marks)

#### Pattern of Internal Test paper of 30mins duration and 20 marks

- Q.1) Objective Questions [ solve 5 out of 6] 5marks
- Q.2) Answer in brief [Any 3 out of 4] 9 marks
- Q.3) Code based question [ Attempt any 2 out of 3] 6 marks

### Semester End Practical Examination (Total 100 marks) Semester V:

Total evaluation is of 100 marks-

- (a) One Question on Unit 1 and Unit 2 -40 Marks
- (b) One Question on Unit 3 and Unit 4 -40 Marks
- (c) Journal -10 Marks
- (d) Viva Voce -10 Marks

#### **Semester VI:**

Total evaluation is of 100 marks-

(a) One Question on Unit 1 and Unit 2 -40 Marks

- **(b) One** Question on Unit 3 and Unit 4 -40 Marks
- (c) Journal -10 Marks
- (d) Viva Voce -10 Marks
