

Hindi Vidya Prachar Samiti's

**RAMNIRANJAN JHUNJHUNWALA COLLEGE OF ARTS,
SCIENCE & COMMERCE**

(Autonomous)

**Affiliated to
University of Mumbai**

Syllabus for the M. Sc.

Program: M. Sc. In Statistics

Program Code: RJSPGSTA

**(Choice Based Credit System with effect from the academic year 2021 – 2022 for Part I and
2022 – 2023 for Part II)**

Syllabus for Approval

	Heading	Particulars
	Title of course	M.Sc. in Statistics
	Eligibility for admission	<p>A candidate for being eligible for admission to the M.Sc. degree course in Statistics must have passed</p> <p>The B.Sc. (Three Year Integrated course) degree examination of this University (or any other University recognized as equivalent there to) with at least Seven Units in Statistics (i.e. the minimum required for majoring in the subject).</p> <p style="text-align: center;">OR</p> <p>With Three Units in Statistics at T.Y.B.Sc. in combination with Three Units of Mathematics at the T.Y.B.Sc.</p> <p>The students will be admitted to the M.Sc. degree course in Statistics on</p>

		the basis of marks obtained at the T.Y.B.Sc. examination.
	Passing Marks	40%
	No. of Years, Semesters	2 Years, 4 Semesters
	Level	Post Graduate
	Pattern	Semester
	Status	Introduced
	To be implemented from Academic Year	Part I: 2021 – 2022, Part II: 2022 – 2023

Members of Board of Studies

Sr. No.	Name of BOS Member	Designation	Signature
1	Mrs. Jayshree Vaze	Associate Professor	
2	Mr. Ajit Limaye	Associate Professor	
3	Mrs. Chhaya Pingre	Associate Professor	
4	Mr. Rahul Tiwari	Assistant Professor	
5	Mr. Jaishankar Singh	Lecturer	
6	Dr. Ganesh Bala	Professor and Head, Department of Biostatistics and Epidemiology Expert other University	

7	Mr. Prasad Patki	Vice Principal, Head and Associate Professor in Statistics, Bhavan's College VC Nominee	
8	Dr. Leena Kulkarni	Assistant Professor NMIMS's Sunandana Divita School of Science Expert other University	
9	Mrs. Pratima Parab	Vice President, Risk Analytics Unit HDFC Bank Industry expert	
10	Mr. Vikas Dubey	Senior Research Analyst, Nielson Alumnus	

Meeting of Board Studies: January 29, 2021

Academic Council: March 23, 2021

Program Educational Objectives

1. To enable graduates to excel professionally by adapting to the dynamic needs of the academia, industry and research in the field of Statistics and Data Science.
2. To enable student to excel in the field of Data Analytics, Data Mining, Machine Learning, Visualization Techniques, Predictive Analysis and Statistical modeling.
3. To practice the problems of analysis and decision making using big data.
4. To gain practical, hands-on experience with programming languages, data analysis tools and frameworks through coursework.

Program Outcomes

Students who have completed the M.Sc. in Statistics will be able to:

1. To apply statistical modeling and data analysis techniques to the solution of real-world business problems, effectively present results using data visualization techniques.
2. To test and train various machine learning algorithms for real world data and applications.
3. To create data warehouse and mine the data for analysis.
4. To analysis big data using various languages and tools.
5. To apply machine learning and deep learning algorithms to real-world problems.

Course Structure**Semester I**

Course Code	Course Name	Group	Teaching Scheme (Hrs/Week)		Credits
			Lectures	Practical	
RJSPGSTA101	Distribution Theory and Its Application	CC	4	-	4
RJSPGSTA102	Applied Statistical Inference	CC	4	-	4
RJSPGSTA103	Sampling Theory	CC	4	-	4
RJSPGSTA104	Linear models and Regression Analysis	CC	4		4
RJSPGSTAPA101	Statistical Computing I (Practical based on Paper I and II in relevant software)	SC-1	-	6	3
RJSPGSTAPA102	Statistical Computing II (Practical based on Paper III and IV in relevant software)	SC-2	-	6	3

RJSPGSTA111	Career Advancement Course Organizational Behavior	OB-1	2	-	2
	Total		18	12	24

Semester II

Course Code	Course Name	Group	Teaching Scheme (Hrs/Week)		Credits
			Lectures	Practical	
RJSPGSTA201	Multivariate Analysis and Its Application	CC	4	-	4
RJSPGSTA202	Design of Experiments	CC	4	-	4
RJSPGSTA203	Stochastic Processes	CC	4	-	4
RJSPGSTA204	Time Series Analysis	CC	4		4
RJSPGSTAPA2 01	Statistical Computing I (Practical based on Paper	SC-1	-	6	3

	I and II in relevant software)				
RJSPGSTAPA202	Statistical Computing II (Practical based on Paper III and IV in relevant software)	SC-2	-	6	3
RJSPGSTA2I1	Career Advancement Course Leadership Development	OB-2	2	-	2
	Total		18	12	24

Semester III

Course Code	Course Name	Group	Teaching Scheme (Hrs/Week)		Credits
			Lectures	Practical	
RJSPGSTA301	Machine Learning	CC	4	-	4
RJSPGSTA302	Big Data Technology	CC	4	-	4
RJSPGSTA303	Data Mining	CC	4	-	4

RJSPGSTA304	Data Warehousing	CC	4	-	4
RJSPGSTAPA301	Statistical Computing I (Practical based on Paper I and II in relevant software)	SC-1	-	6	3
RJSPGSTAPA302	Statistical Computing II (Practical based on Paper III and IV in relevant software)	SC-2	-	6	3
RJSPGSTA3I1	Career Advancement Course	OB-3	2	-	2
	Total		18	12	24

Semester IV

Course Code	Course Name	Group	Teaching Scheme (Hrs/Week)		Credits
			Lectures	Practical	
RJSPGSTA4INT	Industrial Internship	II	-	24	12
RJSPGSTA4MP	Major Project	II	-	24	12
	Total		-	48	24

Note:

Students have to register for the courses as per the following guidelines:

Sr. No.	Category	Credits				Total Credits
		Semester I	Semester II	Semester III	Semester IV	
1	Core Courses (CC)	16 (4 Courses)	16 (4 Courses)	16 (4 Courses)	-	48
2	Statistical Computing-I	03 (1 course)	03 (1 course)	03 (1 course)	-	09
3	Statistical Computing-II	03 (1 course)	03 (1 course)	03 (1 course)	-	09
4	Organizational behaviour	02 (1 course)	02 (1 course)	02 (1 course)	-	06
5	Industrial Internship	-	-	-	-	12

6	Major Project	-	-	-	-	12
Total Credits		24	24	24	24	96

Semester I

S I / P I

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	credits
RJSPGSTA101	Distribution Theory and Its Application	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for Statistical Distributions. 2. To expose students to Statistical Distributions, its theoretical aspects and applications.					
Learning Outcomes Upon completion of this course, the student should be able to understand probability distributions and its application.					

Unit	Topic	Lectures
I	Concept of random variable, Expectation, moments, moment generating function, Distribution function, decomposition of distribution function (Jordan's decomposition), transformation, Mixture probability models, probability models of truncated random variable, Leibnitz's rule, Standard discrete distributions, Standard continuous distributions.	15

II	Bivariate random variable, joint and marginal probability distributions, joint distribution function, conditional distribution and independence, Bivariate transformation, variance and covariance matrix, conditional expectation and variance, Bivariate normal distribution. Multiple and partial correlation coefficient.	15
III	Exact sampling distribution – Chi square, t , F and z probability models Convergence in distribution, convergence in probability, almost sure convergence . Chebychev's inequality. Probability models of quadratic form.	15
IV	Order statistics - Joint distribution of order statistics, Distribution of r^{th} order statistics, joint distribution of r^{th} and s^{th} order statistics($r < s$). Distribution of sample median and sample range. Non parametric test- Krushkal Wallis tests, Chi square goodness of fit test, Kolmogorov- Smirnov one sample and two sample test.	15
<p>References:</p> <ol style="list-style-type: none"> 1. Cassela G. and Berger R .(2002) Statistical Inference (2nd edition), Duxbury Resource Centre. 2. Bhat B.R. (1999): Modern Probability Theory: An introductory test book 3rd edition. New Age International 3. Hogg, R. V., McKean, J. W. and Craig, T. T. (2012). S I / PII

Course code	Course name	Group	Teaching Scheme (Hrs/Week)		credits
RJSPGSTA102	Applied Statistical Inference	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for estimation theory. 2. To expose students to Bayesian inference and its application.					
Learning Outcomes Upon completion of this course, the student should be able to understand applicability of estimation theory in real life.					

Unit	Topic	Lectures
I	Estimation - Sufficiency, Neyman factorization theorem, Unbiasedness, Bounds on variance (Cramer-Rao Lower Bound, Bhattacharya Bound), Maximum likelihood estimation, Asymptotic properties of M.L.E, Consistency, Ancillary and complete statistics, P-value. Testing of Hypothesis - N-P lemma, Most Powerful test, Uniformly Most Powerful test, Likelihood Ratio Test.	15

II	<p>Bootstrap methods –parametric simulation, Non-parametric simulation, Simple confidence interval 's, Reducing Error, Statistical Issues.</p> <p>EM algorithm. Jackknife estimator.</p>	15
III	<p>Bayesian Inference- Bayesian inference from the numerical posterior, Bayesian Inference from Posterior Random Sample.</p> <p>Bayesian Statistics Using Conjugate Priors - One Dimensional Exponential Family of Densities, Distribution for Count data, Distributions for Waiting Times, Normally distributed Observations with known Variance, Normally distributed Observations with known Mean.</p>	15
IV	<p>Markov Chain Monte Carlo Sampling from Posterior</p> <p>Metropolis- Hastings algorithm for a single parameter</p> <p>Metropolis- Hastings algorithm for a Multiple Parameters</p> <p>Block wise Metropolis –Hasting Algorithm</p> <p>Gibbs Sampling.</p>	15

S I / P III

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	credits
RJSPGSTA103	Sampling Theory	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for sampling theory. 2. To expose students to sampling and its applications.					
Learning Outcomes Upon completion of this course, the student should be able to understand how sampling theory is applicable in different organizations.					

Unit	Topic	Lectures
I	Systematic Sampling: Linear Systematic Sampling and Circular Systematic Sampling. Estimation of Population Mean, its Variance, Variance in terms of intra-sample correlation coefficient. Comparison with SRSWOR. Problem in Estimation of Variance using one systematic sample. Use of interpenetrating sub samples in estimation of variance. Other methods of estimation of variance.	15

II	<p>Ratio and Regression Methods of Estimation and Two-phase Sampling Ratio and Regression Estimation of Population mean/total using SRSWOR. Comparison with Mean per Unit Estimator. Separate and combined ratio and regression estimators in stratified sampling. Mean Square error of Estimators. Unbiased type ratio estimator. Hartley-Ross Estimator.</p> <p>Two phase sampling in stratification.</p>	15
III	<p>Cluster Sampling, Two Stage Sampling and Adaptive Sampling Cluster sampling: For equal and unequal cluster sizes. Estimation of population mean/total, its variance and estimation of variance. Ratio to size estimator, Mean of Unit Means Estimator. Comparison with SRSWOR. Cluster Sampling for Proportions.</p> <p>Two Stage Sampling: With and Without Replacement at both the stages. Estimation of Population mean per second stage unit, its variance, estimation of variance. Optimum sampling.</p> <p>Adaptive Sampling: Adaptive Cluster Sampling, Systematic and strip adaptive cluster sampling. Stratified Adaptive Cluster Sampling.</p>	15

IV	<p>Probability Proportional to size sampling and Network Sampling: Probability proportional to size sampling With Replacement (PPSWR): Hansen-Hurwitz Estimator of population total, its variance and estimator of the variance. Comparison with SRSWR. Cumulative Total Method and Lahiri's method of drawing PPSWR. PPSWOR: Horvitz-Thompson Estimator of Population Total, its variance and estimator of variance. Desraj ordered estimator, its expectation and variance, estimation of variance.</p> <p>Network Sampling: Multiplicity Estimators. Horvitz-Thompson Estimator. Stratification in Network Sampling.</p> <p>Non-sampling Errors: Response and Non-response Errors, Effect of Non-Response in simple random sampling.</p>	15

S I / P IV

Course code	Course name	Group	Teaching Scheme (Hrs/Week)		Credits
RJSPGSTA104	Linear models and Regression analysis	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for linear models. 2. To expose students to matrix theory and linear model.					
Learning Outcomes Upon completion of this course, the student should be able to understand how regression is used in different corporate sectors.					

Unit	Topic	Lectures
I	<p>Linear Algebra - Matrix inverses and determinants, Solving systems of equations with matrices, Eigen values and eigenvectors, Orthogonal matrices, Positive definite matrices, Linear transformations, Linear dependence and independence.</p> <p>Linear parametric function and its estimability, Solving linear equations, generalized inverse. Gauss markoff theorem, Interval estimates and test of hypothesis, fundamental theorems on conditional error ss, Test of $\Lambda\beta = d$, generalized least squares.</p>	15
II	<p>Analysis of variance, fixed effect models: i. One-way classification ii. Two-way classification model with and without interaction effect, one observation per cell. Tukey's test for non additivity. Two-way classification model with and without interaction effect with unequal number of observations per cell.</p>	15
III	<p>Linear regression models, subset selection, Stepwise regression: Forward selection, backward elimination and stepwise. Orthogonal polynomials.</p> <p>Assumptions and box-cox transformations in the Analysis of Variance: q-q plot, use of skewness and kurtosis, Bartlett's test for equality of variances, Levene's test.</p>	15

IV	<p>Ridge regression: Eigen values and Eigen vectors of a matrix. Conditioned matrix, need of ridge regression, biased estimator and Mean square error. Bias and MSE of ridge estimator, ridge trace method.</p> <p>Logistic regression: Example, model, MLE of parameters, Iterative procedure to solve likelihood equations, multiple regressors. Multinomial, ordinal, Poisson Analysis of Categorical data: Log linear models, contingency tables.</p>	15

Course code	Course name	Group	Teaching Scheme (Hrs/Week)		credits
RJSPGSTAPA101	Statistical Computing-I	CC	Lectures	Practical	
			-	6	3

List of Practical's:

Practical 1: Exact sampling distribution- chi-square, t, z

Practical 2: Non- parametric test

Practical 3: Estimation

Practical 4: Testing of hypothesis

Practical 5: Jackknife estimator

Practical 6: Bayesian estimation

Practical 7: MCMC

Course code	Course name	Group	Teaching Scheme (Hrs/Week)		credits
RJSPGSTAPA102	Statistical computing-II	CC	Lecture	Practical	
			-	6	3
<p>List of Practical's:</p> <p>Practical 1: Systematic Sampling</p> <p>Practical 2: Two Phase Sampling</p> <p>Practical 3: Cluster and Two Stage Sampling</p> <p>Practical 4: Varying Probability Sampling</p> <p>Practical 5: Matrix Theory-I(Determinant, Rank of Matrix , Inverse of matrix)</p> <p>Practical 6: Linear Model</p> <p>Practical 7: ANOVA</p> <p>Practical 8: Ridge and Logistic Regression</p>					

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	Credits
RJSPGSTA111	Organizational Behavior	CC	Lectures	Practical	
			2	-	2
Course Objectives 1. To give students direct experience of the skills required in organization success. 2. To enhance understanding of organizational behaviour to influence students' success on the job.					
Learning Outcomes Upon completion of this course, the student should be able to understand purpose and importance of behavioural skills in organization life.					

Unit	Topic	Lectures
1	<p>Organisational Behaviour I</p> <ul style="list-style-type: none"> • Introduction to Organizational Behaviour-Concept, definitions, Evolution of OB • Importance of Organizational Behaviour-Cross Cultural Dynamics, Creating Ethical Organizational Culture& Climate • Individual and Group Behaviour-OB models–Autocratic, Custodial, Supportive, Collegial & SOBC in context with Indian OB • Human Relations and Organizational Behaviour 	7
2	<p>Organisational Behaviour II</p> <ul style="list-style-type: none"> • Managing Communication: Conflict management techniques. • Time management strategies. • Learning Organization and Organizational Design • Rewards and Punishments-Termination, layoffs, Attrition, Retrenchment, Separations, Downsizing 	8
3	<p>Human Resource Management-I</p> <ul style="list-style-type: none"> • HRM-Meaning, objectives, scope and functions • HRP-Definition, objectives, importance, factors affecting HRP, Process of HRP, Strategies of HRM , Global HR Strategies • HRD-Concept ,meaning, objectives, HRD functions 	7
4	<p>Human Resource Management-II</p> <ul style="list-style-type: none"> • Performance Appraisal: concept, process, methods and problems, KRA'S • Compensation-concept, components of Pay Structure, Wage and salary administration, Incentives and Employee benefits. • Career planning-concept of career Planning, Career stages and carrier planning 	8

Text Books:

2. Fred Luthans (2013) – Organizational Behaviour: An Evidence Based Approach, 13th Ed., McGraw Hill.

Semester-II

S II / P I

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	credits
RJSPGSTA201	Multivariate Analysis and Its Application	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for multivariate analysis.					
Learning Outcomes Upon completion of this course, the student should be able to understand application of Principal Component Analysis, Factor Analysis and Cluster Analysis.					

Unit	Topic	Lectures
I	Multivariate Distribution Random vector and its properties , Multivariate Normal Distribution and its properties , Distribution of Quadratic Form, Wishart Distribution and its properties, Hotelling's T^2 -Distribution, Wilks - Distribution, Test For Mean Vector.	15

II	Principal Component Analysis_ Introduction, Method of Extraction of Principal Component, Graphical Representation of Principal Component , Properties of Principal Components, Decision Regarding Number of Principal Components, The Effect of Ignoring Some Components.	15
III	<p>Factor Analysis- Introduction, The model for factor analysis, Estimation of Factor Loading, Estimation of Factor Loadings from correlation Matrix, Factor extraction, Interpretation of factors, Factor Score, Factor rotation.</p> <p>Canonical Correlation Analysis- Introduction, Population correlation analysis, Sample Canonical correlation Analysis, Interpretation from Canonical Correlation Analysis, Score and Prediction, Method of Test.</p>	15
IV	<p>Cluster Analysis- Introduction, Basic Steps of Cluster Analysis, Forming Clusters, and Test regarding Clustering.</p> <p>Discriminant Analysis- Scope of Discriminant analysis, Method of Discrimination, Probability of Misclassification, Test of Discriminant Function.</p>	15

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	credits
RJSPGSTA202	Design of Experiments	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for the design of experiments. 2. To expose students to understand the application of different designs.					
Learning Outcomes Upon completion of this course, the student should be able to understand how different designs are used in agricultural and government organizations.					

Unit	Topic	Lectures
I	Randomized Block design, Latin Square Design , Graeco-Latin Square Design, Balance Incomplete Block Design, C matrix , Statistical analysis of BIBD, Estimation of Parameters Model adequacy checking.	15

II	<p>Factorial design – An example. The advantage of factorial designs. 2^2 factorial designs.</p> <p>General 2^k factorial experiment. Blocking, Confounding and partial confounding.</p>	15
III	<p>Experiments with Random Factors</p> <p>Random Effects Models, The Two-Factor Factorial with Random Factors, The Two-Factor Mixed Model.</p> <p>The Two-Stage Nested Design, The Split-Plot Design.</p>	15
IV	<p>Response Surface Methods: Introduction to Response Surface Methodology, The Method of Steepest Ascent, Analysis of a Second-Order Response Surface, Experimental Designs for Fitting Response Surfaces.</p>	15

RJSPGSTA203	Stochastic Processes	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for stochastic Process. 2. To expose students to understand the Markov chain.					
Learning Outcomes Upon completion of this course, the student should be able to understand how stochastic models are used in different model building.					

Unit	Topic	Lectures
I	Markov Chains- Chapman – Kolmogorov equations, Classification of states , Mean time spent in Transient States, Limiting Probabilities, Gambler's ruin problem, random walk, Branching Process.	15

II	<p>Poisson process, Generalization of Poisson process, Random intensity functions and Hawkes Processes.</p> <p>Renewal theory and its applications, Distribution of $N(t)$, Limit theorems and their application, Renewal reward processes, Regenerative processes, Computing the renewal function, Applications to patterns and insurance.</p>	15
III	<p>Continuous-time Markov chains, Birth and Death Processes, The transition probability function $P_{ij}(t)$, Limiting probabilities, Time reversibility, The reversed chain, Computing the transition probabilities. Queuing theory, Queuing models and Network of queues, M/G/1 and its variations, G/M/1, Multi server queues.</p>	15
IV	<p>Brownian motion and stationary processes, Hitting times, Maximum variable, Variations on Brownian motion, Geometric Brownian motion, Application to pricing of stock options, The maximum of Brownian motion with drift, White noise, Gaussian processes.</p>	15

Course Objectives 1. To give students direct experience of the skills required in organization success. 2. To enhance understanding of organizational behavior to influence students' success on the job.					
Learning Outcomes Upon completion of this course, the students will Aware about basics of an organization.					

Unit	Topic	Lectures
1	Leadership Development Leadership–Basic definition, qualities of a leader. Trait theory and styles of leadership The orison Leadership Motivation strategies wrt motivation theories	7

	<p>Emotional intelligence and its significance in the role of a leader</p> <p>Leadership and team building</p>	
2	<p>Leadership skill and conflict management</p> <p>Creative leadership. Influence on the creative potential of work groups and teams; formation of innovative climate in organizations.</p> <p>Leadership in crisis</p>	8
3	<p>Leadership wrt managing a diverse work force, cross cultural dynamics, diverse team and change</p> <p>Creating a safe and healthy work environment</p> <p>Mentoring a tool towards leadership development</p> <p>Leadership in 21th century in terms of developing women leaders, developing policies for LGBTQ community, Green management by overcoming all challenges.</p>	7
4	<p>Case Study</p> <p>Assignment on analyzing successful leaders in terms of their leadership styles, skills and success stories.</p>	8

Semester -III**S III / P I**

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	credits
RJSPGSTA301	Machine Learning	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for various statistical and machine learning concepts and methods. 2. To expose students to understand machine learning solutions to regression, classification and clustering problems.					
Learning Outcomes Upon completion of this course, the student should be able to Perform end-to-end process of investigating data through a machine learning lens.					

	Topic	Lectures
I	Data pre-processing vectors, matrices and arrays, loading data, Data handling Handling numerical data and categorical data, Handling text, dates and time, Handling images. Statistical Learning What is statistical learning, assessing model accuracy.	15
II	Linear Regression, Multiple Linear Regression, Other Considerations in Regression Model, The Marketing Plan, Comparison of Linear Regression with K-Nearest.	15
III	Classification An overview of classification, why not linear regression, logistic regression, linear discriminant analysis, a comparison of classification methods.	15
IV	Unsupervised Learning The challenge of unsupervised learning, principal components analysis, clustering methods (density-based methods, hierarchical-based methods, portioning-based methods, grid-based methods), clustering algorithms (k-means, k-nearest neighbours).	15

Course code	Course name	Group	Teaching Scheme (Hrs/Week)		credits
RJSPGSTA302	Big Data Technology	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for basic and advanced methods of big data technology and tools. 2. To expose students to understand the knowledge of MapReduce, Hadoop and its ecosystem.					
Learning Outcomes Upon completion of this course, the student should be able to understand build and maintain reliable, scalable and distributed systems with Apache Hadoop.					

	Topic	Lectures
I	<p>INTRODUCTION TO BIG DATA</p> <p>Introduction: Distributed file system, Big Data and its importance, Four Vs, Drivers for Big data, Big data analytics, Big data applications. Algorithms using map reduce, Matrix-Vector Multiplication by Map Reduce.</p> <p>INTRODUCTION HADOOP Big Data: Apache Hadoop & Hadoop Ecosystem, Moving Data in and out of Hadoop, Understanding inputs and outputs of MapReduce, Data Serialization.</p>	15
II	<p>HADOOP ARCHITECTURE</p> <p>Hadoop Architecture, Hadoop Storage: HDFS, Common Hadoop Shell commands, Anatomy of File Write and Read., Name Node, Secondary Name Node, and Data Node, Hadoop MapReduce paradigm, Map and Reduce tasks, Job, Task trackers, Cluster Setup, SSH & Hadoop Configuration, HDFS Administering, Monitoring & Maintenance.</p>	15
III	<p>HADOOP ECOSYSTEM AND YARN</p> <p>Hadoop ecosystem components: Schedulers, Fair and Capacity, Hadoop 2.0 New Features Name Node High Availability, HDFS Federation, MRv2, YARN, Running MRv1 in YARN.</p>	15

IV	Hive and HiveQL, HBase Hive Architecture and Installation, Comparison with Traditional Database. HiveQL Querying Data, Sorting and Aggregating, Map Reduce Scripts, Joins & Subqueries. HBase concepts Advanced Usage, Schema Design, Advance Indexing, PIG, Zookeeper, how it helps in monitoring a cluster, HBase uses Zookeeper and how to Build Applications with Zookeeper.	15

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	credits
RJSPGSTA303	Data Mining	CC	Lectures	Practical	
			4	-	4
Course Objectives 1. To provide theoretical foundations for data mining. 2. To expose students to learn the computational approaches to Modelling and Feature Extraction.					
Learning Outcomes Upon completion of this course, the student should be able to design algorithms by employing Map Reduce technique for solving Big Data problems.					

	Topic	Lectures
I	<p>Data Mining—On What Kind of Data?</p> <p>Relational Databases, Data Warehouses, Transactional Databases, Advanced Data and Information Systems and Advanced Applications.</p> <p>Data Mining Functionalities—What Kinds of Patterns Can Be Mined?</p> <p>Concept/Class Description: Characterization and Discrimination, Mining Frequent Patterns, Associations, and Correlations, Classification and Prediction, Cluster Analysis, Outlier Analysis, Evolution Analysis.</p> <p>Classification of Data Mining Systems.</p>	15
II	<p>Data Pre-processing : Descriptive Data Summarization , Data Cleaning, Data Integration and Transformation, Data Reduction, Data Discretization and Concept Hierarchy Generation .</p>	15
III	<p>Data Warehouse and OLAP Technology: What is a Data Warehouse?, A Multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, From Data Warehousing to Data Mining.</p>	15
IV	<p>Classification and Prediction: What Is Classification? What Is Prediction?, Issues Regarding Classification and Prediction, Classification by Decision Tree Induction, Bayesian Classification, Rule-Based Classification, Support Vector Machines, Lazy Learners (or Learning from Your Neighbours).</p>	15

S III / P IV

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	credits
RJSPGSTA304	Data Warehousing	CC	Lectures	Practical	
			4	-	4
Course Objectives					
Learning Outcomes Upon completion of this course, the student should be able to understand Perform ETL process on source data and send it to data warehouse database.					

	Topic	Lectures
I	Data Warehousing, Business Intelligence, and Dimensional Modeling Primer Different Worlds of Data Capture and Data Analysis, Goals of Data Warehousing and Business Intelligence, Dimensional Modeling Introduction, Kimball's DW/BI Architecture, Alternative DW/BI Architectures, Dimensional Modeling Myths.	15

II	Kimball Dimensional Modeling Techniques Overview Fundamental Concepts, Basic Fact Table Techniques, Basic Dimension Table Techniques, Integration via Conformed Dimensions, Dealing with Slowly Changing Dimension Attributes, Dealing with Dimension Hierarchies.	15
III	Retail Sales Four-Step Dimensional Design Process, Retail Case Study, Dimension Table Details, Retail Schema in Action, Retail Schema Extensibility, Fact less Fact Tables, Dimension and Fact Table Keys, Resisting Normalization Urges. Order Management Order Management Bus Matrix, Order Transactions, Invoice Transactions, Accumulating Snapshot for Order Fulfilment Pipeline.	15
IV	Inventory Value Chain Introduction, Inventory Models, Fact Table Types, Value Chain Integration, Enterprise Data Warehouse Bus Architecture, Conformed Dimensions. Customer Relationship Management Overview, Customer Dimension Attributes, Bridge Tables for Multivalued Dimensions, Complex Customer Behaviour, Customer Data Integration Approaches, Low Latency Reality Check.	15

Course code	Course name	Group	Teaching (Hrs/Week)	Scheme	Credits
RJSPGSTA311	Buisness Ethics and CSR	CC	Lectures	Practical	
			2	-	2
Course Objectives 1. To give students direct experience of the skills required in organization success. 2. To enhance understanding of organizational behaviour to influence students' success on the job.					
Learning Outcomes Upon completion of this course, Application through assignments and/or class room participation (of key skills to improve the students' skills of operating in a group)					

Unit	Topic	Lectures
1	<p>Business Ethics</p> <p>Introduction to Business Ethics, Business Ethics and Management, Business Ethics and Moral Obligations; Importance of Business Ethics</p> <p>Theories on Business Ethics</p> <p>Deontology, Utilitarianism, Rights, and Virtues</p> <p>Structure of ethics management: Ethics Committee, Ethics Officers, and the CEO</p> <p>Communicating ethics: Communication Principles, Channels, Training programmes, and evaluation and Ethical Audit, Whistle Blowing, Types of whistle blowers, Whistle Blower Policy, The whistleblower and developments in India.</p>	7
2	<p>Ethical Decision Making and Ethical Leadership</p> <p>Individual Factors: Moral philosophies</p> <p>Organizational Factors: The role of Ethical Culture and Relationships</p> <p>Ethical issues involved in employer employee relationship</p> <p>Developing an effective Ethics program</p> <p>Implementing and auditing an ethics program</p> <p>Business ethics in global economy</p> <p>Corporate Philanthropy</p>	8

3	<p>Introduction to Corporate Social Responsibility, History of CSR, Concepts of Charity, Corporate Citizenship , Models of CSR (Friedman Model, Carroll Model, Ackerman model), CSR through triple bottom line,</p> <p>CSR-Legislation in India</p> <p>Section 135 of Companies Act 2013.Scope for CSR Activities under Schedule VII, Appointment of Independent Directors on the Board, and Computation of Net Profit's Implementing Process in India.</p> <p>International framework for Corporate Social Responsibility</p> <p>Sustainable Development Goals, UN guiding principles on business and human rights</p>	7
4	<p>CSR initiatives in India</p> <p>Case studies on CSR</p>	8
